AR Agent

One-page repository summary

Evidence: ar-agent/*.py

Generated from local repo only

Date: 2026-04-17

WHAT IT IS

A small Python AR workflow prototype that extracts text from an EOB PDF, asks Groq AI to pull claim details, and returns recommended next actions.

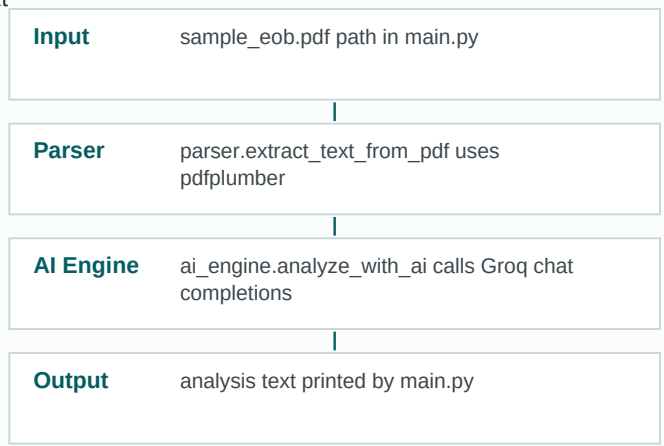
WHO IT IS FOR

Primary persona: healthcare accounts receivable or billing staff reviewing EOB denials and balances. Exact organization, buyers, and roles: Not found in repo.

WHAT IT DOES

- Reads a PDF EOB using pdfplumber and extracts page text.
- Sends extracted EOB text to the Groq AI API for analysis.
- Prompts the model to extract ICN, balance, denial codes, and CPTs.
- Asks the model to suggest an action based on AR workflow.
- Uses llama-3.3-70b-versatile through Groq chat completions.
- Includes rule logic that routes PR, OA-18, PI-140, M44, and high balances.
- Prints the analysis result to the terminal from main.py.

HOW IT WORKS



Rule module evidence:

- PR -> Patient Billing; OA-18 -> Adjust.
- PI-140 -> Registration; M44 -> Check SOP for Condition Code.
- balance > 1000 -> Adjustment Queue; otherwise Manual Review.
- Integration between AI result and apply_rules(): Not found in repo.

HOW TO RUN

1. cd ar-agent
2. python3 -m pip install -r requirements.txt
3. Set GROQ_API_KEY in the environment for the Groq client.
4. Place sample_eob.pdf beside main.py, or edit file_path in main.py.
5. python3 main.py

REPO GAPS

- README or product docs: Not found in repo.
- sample_eob.pdf: Not found in repo.
- Tests, web UI, database, deployment files: Not found in repo.
